WARNING: If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  • If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency or the gas supplier.

WARNING: This appliance is equipped for Natural and Propane gas. Field conversion is not permitted other than between natural or propane gases.

Questions about installation, operation, or troubleshooting?
Before returning to your retailer, call KOZY WORLD at 1-800-776-9425.

**SAVE THIS BOOK**

**INSTALLER:** Leave this manual with the appliance.
**CONSUMER:** Retain this manual for future reference.

This is an unvented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided. Refer to *Air For Combustion and Ventilation* section on page 7 of this manual.

⚠️ **WARNING:** Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual for correct installation and operational procedures. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket,* permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only for use with propane or natural gas. This appliance is equipped with a simple means to switch between propane and natural gas. Field conversion by any other means including the use of a kit is not permitted.

*Aftermarket: Completion of sale, not for purpose of resale, from the manufacturer.*
### SAFETY

**IMPORTANT:** Read this owner’s manual carefully and completely before trying to assemble, operate, or service this heater. Improper use of this heater can cause serious injury or death from burns, fire, explosion, electrical shock and carbon monoxide poisoning. Failure to follow these instructions will void the warranty.

Only a qualified installer, service agent, or local gas supplier may install and service this product.

**WARNING:** Keep the appliance area clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

**WARNING:** This appliance can be used with propane or natural gas. It is shipped from the factory adjusted for use with propane.

**CARBON MONOXIDE POISONING:** Early signs of carbon monoxide poisoning resemble the flu, with headaches, dizziness or nausea. If you have these signs, the heater may not be working properly. Get fresh air at once! Have heater serviced. Some people are more affected by carbon monoxide than others. These include pregnant women, people with heart or lung disease or anemia, those under the influence of alcohol and those at high altitudes.

**NATURAL AND PROPANE/LP GAS:** Natural and Propane/LP gas are odorless. An odor-making agent is added to the gas. The odor helps you detect a gas leak. However, the odor added to the gas can fade. Gas may be present even though no odor exists.

**WARNING:** Any change to this fireplace or its controls can be dangerous.

**WARNING:** Do not allow fans to blow directly into fireplace. Avoid any drafts that alter burner flame patterns.

**WARNING:** Do not use a blower insert, heat exchange insert or other accessory not approved for use with this heater.

**WARNING:** Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

**WARNING:** Do not place clothing or other flammable material on or near the appliance. Never place any objects in the fireplace.

**WARNING:** Fireplace becomes very hot when running. Keep children and adults away from hot surfaces to avoid burns or clothing ignition. Fireplace will remain hot for a time after shutdown. Allow surfaces to cool before touching.

**WARNING:** Carefully supervise young children when they are in the room with the heater.

**WARNING:** You must operate this fireplace with screen in place.
SAFETY

1. Do not place Propane/LP supply tank(s) inside any structure. Propane/LP supply tank(s) must be placed outdoors.

2. This heater shall not be installed in a bedroom or bathroom.

3. This heater needs fresh air ventilation to run properly. This heater has an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS shuts down the heater if not enough fresh air is available. See Air for Combustion and Ventilation, pages 7 through 9. If heater keeps shutting off, see Troubleshooting, page 26.

4. Keep all air openings in front and bottom of heater clear and free of debris. This will ensure enough air for proper combustion.

5. If heater shuts off, do not relight until you have provided fresh, outside air. If heater keeps shutting off, have it serviced.

6. Do not run heater:
   - Where flammable liquids or vapors are used or stored.
   - Under dusty conditions.

7. Before using furniture polish, wax, carpet cleaner, or similar products, turn heater off. If heated, the vapors from these products may create a white powder residue within burner box or on adjacent walls or furniture.

8. Always run heater with control knob at PILOT or ON locked positions. Never set control knob between locked positions. Poor combustion and higher levels of carbon monoxide may result.

9. Do not use heater if any part has been under water. Immediately call a qualified service technician to inspect the room heater and to replace any part of the control system and any gas control which has been under water.

10. Turn off and unplug heater and let cool before servicing. Only a qualified service person should service and repair heater.

11. Operating heater above elevations of 4,500 feet could cause pilot outage.

12. To prevent performance problems, do not use propane/LP fuel tank of less than 100 lbs. capacity.

13. Do not use this heater as a wood-burning heater. Use only the logs provided with the heater.

14. To prevent sooting, follow the instructions in Care and Maintenance (see page 25).

15. Do not add extra logs or ornaments such as pine cones, vermiculite, or rock wool. Using these added items can cause sooting. Do not add lava rock around base. Rock and debris could fall into the control area of heater. After servicing, always replace screen before operating heater.

16. This heater is designed to be smokeless. If logs ever appear to smoke, turn off heater and call a qualified service person.

Note: During initial operation, slight smoking could occur due to log curing and the heater burning manufacturing residues.

QUALIFIED INSTALLING AGENCY

Only a qualified agency should install and replace gas piping, gas utilization equipment or accessories, and repair and equipment servicing. The term “qualified agency” means any individual, firm, corporation, or company that either in person or through a representative is engaged in and is responsible for:

a) Installing, testing, or replacing gas piping or
b) Connecting, installing, testing, repairing, or servicing equipment; that is experienced in such work; that is familiar with all precautions required; and that has complied with all the requirement of the authority having jurisdiction.

PRODUCT FEATURES

SAFETY PILOT
This heater has a pilot with an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS/pilot shuts off the heater if there is not enough fresh air.

PIEZO IGNITION SYSTEM
This heater is equipped with an electronic piezo control system. This system requires one AAA battery (provided).

2 GAS OPTIONS AVAILABLE
Your heater is equipped to operate on either Propane/LP or Natural gas. The heater is shipped from the factory ready for connecting to Propane/LP. The heater can easily be changed to Natural gas by having your qualified installer follow the instructions on page 11 and the markings on the heater.

LOCAL CODES

Install and use heater with care. Follow all local codes. In the absence of local codes, use the latest edition of The National Fuel Gas Code, ANSI Z223.1/NFPA 54*.

*Available from:
American National Standards Institute, Inc.
1430 Broadway
New York, NY 10018
National Fire Protection Association, Inc.
1 Batterymarch Park
Quincy, MA 02269-9101

This heater is designed for vent-free operation. State and local codes in some areas prohibit the use of vent-free heaters.

State of Massachusetts: The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts.

Sellers of unvented propane or natural gas-fired supplemental room heaters shall provide to each purchaser a copy of 527 CMR 30 upon sale of the unit.

In the State of Massachusetts the gas cock must be a T-handle type. The State of Massachusetts requires that a flexible appliance connector cannot exceed three feet in length.
UNPACKING

1. Remove top inner pack.
2. Tilt carton so that heater is upright.
3. Remove protective side packaging.
4. Slide heater out of carton.
5. Remove protective plastic wrap.
6. Hold the screen, lift, and pull forward.
7. Remove log set by cutting plastic ties.
8. Carefully unwrap log.
9. Check for any shipping damage. If heater or log is damaged, promptly inform your dealer where you bought the heater.

PRODUCT IDENTIFICATION

Figure 1 - Vent-Free Fireplace Insert

WATER VAPOR: A BY-PRODUCT OF UNVENTED ROOM HEATERS

Water vapor is a by-product of gas combustion. An unvented room heater produces approximately one (1) ounce (30 mL) of water for every 1,000 BTUs (0.3 KWs) of gas input per hour. Unvented room heaters are recommended as supplemental heat (a room) rather than a primary heat source (an entire house). In most supplemental heat applications, the water vapor does not create a problem. In most applications, the water vapor enhances the low humidity atmosphere experienced during cold weather.

The following steps will help ensure that water vapor does not become a problem.

1. Be sure the heater is sized properly for the application, including ample combustion air and circulation air.
2. If high humidity is experienced, a dehumidifier may be used to help lower the water vapor content of the air.
3. Do not use an unvented room heater as the primary heat source.
AIR FOR COMBUSTION AND VENTILATION

⚠️ WARNING: This heater shall not be installed in a confined space or unusually tight construction unless provisions are provided for adequate combustion and ventilation air. Read the following instructions to insure proper fresh air for this and other fuel-burning appliances in your home.

Today's homes are built more energy efficient than ever. New materials, increased insulation and new construction methods help reduce heat loss in homes. Home owners weather strip and caulk around windows and doors to keep the cold air out and the warm air in. During heating months, home owners want their homes as airtight as possible. While it is good to make your home energy efficient, your home needs to breathe. Fresh air must enter your home. All fuel-burning appliances need fresh air for proper combustion and ventilation. Exhaust fans, fireplaces, clothes dryers and fuel burning appliances draw air from the house to operate. You must provide adequate fresh air for these appliances. This will insure proper venting of vented fuel-burning appliances.

PROVIDING ADEQUATE VENTILATION

The following are excerpts from National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation.

All spaces in homes fall into one of the three following ventilation classifications:

1. Unusually Tight Construction
2. Unconfined Space
3. Confined Space

The information on pages 7 through 9 will help you classify your space and provide adequate ventilation.

Unusually Tight Construction

The air that leaks around doors and windows may provide enough fresh air for combustion and ventilation. However, in buildings of unusually tight construction, you must provide additional fresh air.

Unusually tight construction is defined as construction where:

a. walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of one perm (6 x 10^-11 kg per pa-sec-m^2) or less with openings gasketed or sealed and
b. weather stripping has been added on openable windows and doors and

c. caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical and gas lines and at other openings.

If your home meets all of these three criteria, you must provide additional fresh air. See Ventilation Air From Outdoors, page 9.

If your home does not meet all of the three criteria above, proceed to Determining Fresh-Air Flow For Heater Location, page 8.

Confined and Unconfined Space

The National Fuel Gas Code, ANSI Z223.1/ NFPA 54 defines a confined space as a space whose volume is less than 50 cubic feet per 1,000 Btu/hr (4.8 m^3 per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed*, through openings not furnished with doors, are considered a part of the unconfined space.

* Adjoining rooms are communicating only if there are doorless passageways or ventilation grills between them.
AIR FOR COMBUSTION AND VENTILATION

DETERMINING FRESH-AIR FLOW FOR HEATER LOCATION

Determining if You Have a Confined or Unconfined Space

Use this worksheet to determine if you have a confined or unconfined space.

Space: Includes the room in which you will install heater plus any adjoining rooms with doorless passageways or ventilation grills between the rooms.

1. Determine the volume of the space (length \times width \times height).
   \[
   \text{Length} \times \text{Width} \times \text{Height} = \text{cu. ft. (volume of space)}
   \]

   \textbf{Example:} Space size 20 ft. (6.1 m) (length) \times 16 ft. (4.88 m) (width) \times 8 ft. (2.44 m) (ceiling height) = 2560 cu. ft. (72.49 m³) (volume of space)

   If additional ventilation to adjoining room is supplied with grills or openings, add the volume of these rooms to the total volume of the space.

2. Multiply the space volume by 20 to determine the maximum Btu/Hr the space can support.

   \[
   \text{Volume of space} \times 20 = \text{Maximum Btu/Hr the space can support}
   \]

   \textbf{Example:} 2560 cu. ft. (72.49 m³) (volume of space) \times 20 = 51,200 (maximum Btu/Hr the space can support)

3. Add the Btu/Hr of all fuel burning appliances in the space.

   \begin{array}{ll}
   \text{Vent-free heater} & \text{Btu/Hr} \\
   \text{Gas water heater}^* & \text{Btu/Hr} \\
   \text{Gas furnace} & \text{Btu/Hr} \\
   \text{Vented gas heater} & \text{Btu/Hr} \\
   \text{Gas fireplace logs} & \text{Btu/Hr} \\
   \text{Other gas appliances}^{+} & \text{Btu/Hr} \\
   \text{Total} & \text{Btu/Hr}
   \end{array}

   \text{* Do not include direct-vent gas appliances. Direct-vent draws combustion air from the outdoors and vents to the outdoors.}

   \textbf{Example:}

   \begin{array}{ll}
   \text{Gas water heater} & 30,000 \text{ Btu/Hr} \\
   \text{Vent-free heater} & +26,000 \text{ Btu/Hr} \\
   \text{Total} & = 56,000 \text{ Btu/Hr}
   \end{array}

4. Compare the maximum Btu/Hr the space can support with the actual amount of Btu/Hr used.

   \[
   \frac{\text{Btu/Hr (maximum can support)} - \text{Btu/Hr (actual amount used)}}{\text{(actual amount of Btu/Hr used)}}
   \]

   \textbf{Example:} 51,200 Btu/Hr (maximum the space can support) 56,000 Btu/Hr (actual amount of Btu/Hr used)

   The space in the above example is a confined space because the actual Btu/Hr used is more than the maximum Btu/Hr the space can support. You must provide additional fresh air. Your options are as follows:

   A. Rework worksheet, adding the space of an adjoining room. If the extra space provides an unconfined space, remove door to adjoining room or add ventilation grills between rooms. See Ventilation Air From Inside Building, page 9.

   B. Vent room directly to the outdoors. See Ventilation Air From Outdoors, page 9.

   C. Install a lower Btu/Hr heater, if lower Btu/Hr size makes room unconfined. If the actual Btu/Hr used is less than the maximum Btu/Hr the space can support, the space is an unconfined space. You will need no additional fresh air ventilation.

\textbf{WARNING:} If the area in which the heater may be operated does not meet the required volume for indoor combustion air, combustion and ventilation air shall be provided by one of the methods described in the National Fuel Gas Code, ANSI Z223.1/NFPA 54, the International Fuel Gas Code, or applicable local codes.
VENTILATION AIR

Ventilation Air From Inside Building

This fresh air would come from an adjoining unconfined space. When ventilating to an adjoining unconfined space, you must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor on the wall connecting the two spaces (see options 1 and 2, Figure 2). You can also remove door into adjoining room (see option 3, Figure 2). Follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

Ventilation Air From Outdoors

Provide extra fresh air by using ventilation grills or ducts. You must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor. Connect these items directly to the outdoors or spaces open to the outdoors. These spaces include attics and crawl spaces. Follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

IMPORTANT: Do not provide openings for inlet or outlet air into attic if attic has a thermostat-controlled power vent. Heated air entering the attic will activate the power vent. Rework worksheet, adding the space of the adjoining unconfined space. The combined spaces must have enough fresh air to supply all appliances in both spaces.
NOTICE: This heater is intended for use as supplemental heat. Use this heater along with your primary heating system. Do not install this heater as your primary heat source. If you have a central heating system, you may run system’s circulating blower while using heater. This will help circulate the heat throughout the house. In the event of a power outage, you can use this heater as your primary heat source.

⚠️ WARNING: A qualified service person must install heater. Follow all local codes.

⚠️ WARNING: Never install the heater
- in a bedroom or bathroom
- in a recreational vehicle
- where curtains, furniture, clothing, or other flammable objects are less than 42" from the front, top, or sides of the heater
- in high traffic areas
- in windy or drafty areas

⚠️ CAUTION: This heater creates warm air currents. These currents move heat to wall surfaces next to heater. Installing heater next to vinyl or cloth wall coverings or operating heater where impurities (such as tobacco smoke, aromatic candles, cleaning fluids, oil or kerosene lamps, etc.) in the air exist, may cause walls to discolor.

IMPORTANT: Vent-free heaters add moisture to the air. Although this is beneficial, installing heater in rooms without enough ventilation air may cause mildew to form too much moisture. See Air for Combustion and Ventilation, pages 7 through 9.

CHECK GAS TYPE
Be sure your gas supply is right for your heater. Otherwise, call dealer where you bought the heater for proper type heater.

CLEARANCES TO COMBUSTIBLES

⚠️ WARNING: You must maintain the minimum clearances shown in Figure 4. If you can, provide greater clearances from floor, ceiling, and joining wall. Measure from outermost point of heater.

Minimum Wall and Ceiling Clearances
A. Clearances from outermost point of heater to any combustible side wall should not be less than 7".
B. Clearances from the heater to the ceiling should not be less than 42".

Note: When heater is installed directly on carpeting, vinyl or other combustible material, other than wood flooring, the heater must be installed on a metal or wood panel extending the full width and depth of the heater.

Figure 4 - Minimum Clearances to Wall and Ceiling
INSTALLATION

GAS SELECTION

This appliance is factory preset for propane/LP gas. No changes are required for connecting to propane/LP. Only a qualified installer or service technician can perform gas selection and connecting to gas supply.

⚠️ CAUTION: Two gas line installations at the same time are prohibited. The access plate to the simple switching means shall not be opened while the heater is in operation.

⚠️ CAUTION: To avoid gas leakage at the inlet of regulator, a qualified installer or service technician must use supplied hex plug with sealant.

⚠️ WARNING: Do not attempt to access or change the setting of the fuel selection means.

Access to and adjustment of the fuel selection means must only be performed by a qualified service person when connecting this appliance to a specified fuel supply at the time of installation. Change of the selector setting to other than the fuel type specified at the time of installation could damage this appliance and render it inoperable.

The installer shall replace the access cover before completing the installation and operating this appliance.

For changing from propane to natural gas supply:
1. Remove 2 screws from cover plate to expose fuel selection device (see Figure 14, page 15).
2. For NATURAL GAS, press in knob using a flat screwdriver with a blade with thickness of a quarter and turn knob clockwise until the knob locks into the NG position (see Figure 5). Fuel selection device must be locked in the NG position. Do not operate heater between locked positions!
3. Rotate and close cover over fuel selection device and reinstall screw.
4. Remove hex plug (with wrench provided) from natural gas inlet of regulator (see Figure 5). Install gas line into NG inlet of regulator. Use thread sealant to assure there are no leaks.

![Figure 5 - Settings for Natural Gas Selection](image)

For changing from natural gas supply to propane supply:
1. Remove 2 screws from cover plate to expose fuel selection device (see Figure 14, page 15).
2. For propane gas, press in knob using a flat screwdriver with a blade thickness of a quarter and turn knob counterclockwise until the knob locks into the LP position (see Figure 6). Fuel selection device must be locked in the LP position. Do not operate heater between locked positions.
3. Rotate and close cover over fuel selection device and reinstall screw.
4. Remove hex plug (with wrench provided) from propane/LP gas inlet of regulator (see Figure 6). Install gas line into LP inlet of regulator. Use thread sealant to assure there are no leaks.

![Figure 6 - Settings for Propane/LP Gas Selection](image)

---

200038-01B  www.worldmkting.com  11
INSTALLATION

BUILT-IN FIREPLACE INSTALLATION

⚠️ WARNING: Do not allow any combustible materials to overlap the firebox front.

⚠️ WARNING: Do not allow combustible or noncombustible materials to cover any necessary openings like louvered slots.

⚠️ WARNING: Never modify or cover the louvered slots on the front of the firebox.

Built-in installation of this fireplace involves installing fireplace into a framed-in enclosure. This makes the front of the fireplace flush with wall. If installing a built-in mantel above the fireplace, you must follow the clearances shown in Figure 7.

NOTICE: Surface temperatures of adjacent walls and mantels become hot during operation. Walls and mantels above the fireplace may become hot to the touch. If installed properly, these temperatures meet the requirement of the national product standard. Follow all minimum clearances shown in this manual (see Figure 7).

1. Frame in rough opening. Use dimensions shown in Figure 8 for the rough opening. If installing in a corner, use dimensions shown in Figure 10 (page 13) for the rough opening. The height is 23 1/4", which is the same as the wall opening above.

2. Carefully set fireplace in front of rough opening with back of fireplace inside wall opening.

Figure 7 - Clearance to Combustibles

Figure 8 - Fireplace Clearances

Figure 9 - Rough Opening for Wall Installation

IMPORTANT: When finishing your firebox, combustible materials such as wall board, gypsum board, sheet rock, drywall, plywood, etc, must have 1/2" clearance to the sides and top of the firebox. Combustible materials should never overlap the firebox front.

**INSTALLING HOOD**

⚠️ **CAUTION:** Do not operate fireplace without hood in place.

1. Align 3 holes in upper side of hood with holes in heat insulation board (see Figure 11).
2. Insert screwdriver through hole in top firebox panel to secure hood to heat insulation board with 3 screws (see Figure 11).
INSTALLATION

CONNECTING TO GAS SUPPLY

⚠️ WARNING: A qualified service technician must connect heater to gas supply. Follow all local codes.

⚠️ WARNING: This appliance requires a 3/8" NPT (National Pipe Thread) inlet connection to the pressure regulator.

⚠️ WARNING: For natural gas, never connect heater to private (non-utility) gas wells. This gas is commonly known as wellhead gas.

⚠️ WARNING: Do not overtighten gas connections.

⚠️ CAUTION: Use only new, black iron or steel pipe. Internally tinned copper tubing may be used in certain areas. Check your local codes. Use pipe of 1/2" diameter or greater to allow proper gas volume to heater. If pipe is too small, undue loss of pressure will occur.

⚠️ CAUTION: For natural gas, check your gas line pressure before connecting heater to gas line. Gas line pressure must be no greater than 10.5" of water. If gas line pressure is higher, heater regulator damage could occur.

⚠️ CAUTION: Avoid damage to regulator. Hold gas regulator with wrench when connecting into gas piping and/or fittings.

⚠️ CAUTION: For propane/LP gas, never connect heater directly to the gas supply. This heater requires an external regulator (not supplied). Install the external regulator between the heater and gas supply. Gas supplier provides external regulator for natural gas. The installer provides the external regulator for propane/LP gas.

⚠️ CAUTION: Use pipe joint sealant that is resistant to gas (Propane/LP or Natural Gas).

Before installing heater, make sure you have the items listed below:
- external regulator for propane/LP unit only (supplied by installer)
- piping (check local codes)
- sealant (resistant to natural gas and propane/LP gas)
- equipment shutoff valve*
- test gauge connection*
- sediment trap
- tee joint
- pipe wrench
- flexible gas hose (check local codes)
* A CSA design-certified equipment shutoff valve with 1/8" NPT tap is an acceptable alternative to test gauge connection. Purchase the optional CSA design certified equipment shutoff valve from your dealer.

Typical Inlet Pipe Diameters

Use 3/8" black iron pipe or greater. Installation must include an equipment shutoff valve, union, and plugged 1/8" NPT tap. Locate NPT tap within reach for test gauge hook up. NPT tap must be upstream from heater (see Figure 12, page 15).

IMPORTANT: Install an equipment shutoff valve in an accessible location. The equipment shutoff valve is for turning on or shutting off the gas to the appliance.
INSTALLATION

Apply pipe joint sealant lightly to male threads. This will prevent excess sealant from going into pipe. Excess sealant in pipe could result in clogged heater valves.

For propane/LP installations, the installer must supply an external regulator. The external regulator will reduce incoming gas pressure. You must reduce incoming gas pressure to between 11" and 14" of water. If you do not reduce incoming gas pressure, heater regulator damage could occur. Install external regulator with the vent pointing down as shown in Figure 13. Pointing the vent down protects it from freezing rain or sleet.

For both gas types, install sediment trap in supply line as shown in Figure 12. Place sediment trap where it is within reach for cleaning. Place sediment trap where trapped matter is not likely to freeze. A sediment trap traps moisture and contaminants. This keeps them from going into heater controls. If sediment trap is not installed or is installed wrong, heater may not run properly.

* Purchase the optional CSA design-certified equipment shutoff valve from your dealer.

Figure 12 - Gas Connection

Figure 13 - External Regulator with Vent Pointing Down

Figure 14 - Gas Regulator Location and Gas Line Access into Fireplace Cabinet

www.worldmktting.com
WARNING: Test all gas piping and connections for leaks after installing or servicing. Correct all leaks at once.

WARNING: Never use an open flame to check for a leak. Apply a noncorrosive leak detection fluid to all joints. If bubbles form, there is a leak. Correct all leaks at once.

PRESSURE TESTING GAS SUPPLY PIPING SYSTEM
Test Pressures In Excess Of 1/2 PSIG (3.5 kPa)

1. Disconnect heater with its appliance main gas valve (control valve) and equipment shutoff valve from gas supply piping system. Pressures in excess of 1/2 PSIG will damage heater regulator.

2. Cap off open end of gas pipe where equipment shutoff valve was connected.

3. Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter for natural gas or using compressed air.

4. Check all joints of gas supply piping system. Apply noncorrosive leak detection fluid to all joints. If bubbles form, there may be a leak.

5. Correct all leaks at once.

6. Reconnect heater and equipment shutoff valve to gas supply. Check reconnected fittings for leaks.

Test Pressures Equal To or Less Than 1/2 PSIG (3.5 kPa)

1. Close equipment shutoff valve (see Figure 15).

2. Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter for natural gas or using compressed air.

3. Check all joints from gas meter to equipment shutoff valve for natural gas or propane/LP supply to equipment shutoff valve for propane/LP (see Figure 16 or 17). Apply a noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.

4. Correct all leaks at once.

PRESSURE TESTING HEATER GAS CONNECTIONS

1. Open equipment shutoff valve (see Figure 15).

2. Open main gas valve located on or near gas meter for natural gas or open propane/LP supply tank valve.

3. Make sure control knob of heater is in the OFF position.

Footnotes:
1. Figure 15 - Equipment Shutoff Valve
2. Figure 16 - Checking Gas Joints for Propane/LP Gas
3. Figure 17 - Checking Gas Joints for Natural Gas
4. Check all joints from equipment shutoff valve to control valve (see Figure 16 or 17, page 16). Apply a noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.

5. Correct all leaks at once.

6. Light heater (see Lighting Instructions on page 20). Check all other internal joints for leaks.

7. Turn off heater (see To Turn Off Gas Appliance, page 21).

INSTALLATION FOR DECORATIVE TRIM

1. Identify left, right and top decorative trim pieces (see Figure 18).

2. Slide slots in 3 trim pieces over screws on the fireplace (see Figure 19).

![Top Trim Piece](image1.png)

Right Trim Piece

Left Trim Piece

**Figure 18 - Decorative Trim**

![Top Decorative Trim](image2.png)

Screw

Left/Right Decorative Trim

**Figure 19 - Installing Decorative Trim**
**WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.

**CAUTION:** After installation, and periodically thereafter, check to ensure that no flame comes in contact with any log. With the heater set to high, check to see if flames contact any log. If so, reposition logs according to the log installation instructions in this manual. Flames contacting logs will create soot.

Each log is marked with a number. This number will help you to identify the logs when installing.

After installing logs, add decorative cinders around the grate base, do not place any decorative cinders on logs or burner.

**IMPORTANT:** Make sure logs do not cover any burner ports. It is very important to install the logs exactly as instructed. Do not modify logs. Use only logs supplied with heater.

Logs 1 through 6 have pins on the back that slide into the slots in the base brackets. Some logs may have pins that fit into holes on another log. This helps keep them in place.

![Figure 20 - Log Base](image)

![Figure 21 - Installing Logs](image)
INSTALLATION

INSTALLING BATTERIES

⚠️ CAUTION: Do not mix old and new batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable (nickel-cadmium) batteries. Do not dispose of batteries in fire, batteries may explode or leak.

- Batteries are included.
- Remove batteries when depleted.
- Install/replace the batteries according to the type and quantity stated in table below.
- Be sure to observe proper polarity (+/-) when installing or replacing the batteries. Damage due to improper battery installation may void the warranty on the product.
- For remote control systems, maximize battery life by turning off the receiver when it is not in use.
- For long periods of non-operation, remove batteries from all components for safety.

<table>

</tr>
</tbody>
</table>

*Note: Quantity depends on model of remote control.

Receiver and Remote Control

Batteries are required in both the Remote Control (Transmitter) (2 AAA size) and Receiver (4 AA size) (see Figure 23).

Note: Be sure batteries are placed correctly. Reversing the batteries can cause damage to the receiver and remote. Replace all batteries on a yearly basis or sooner.

Position the slide switch on the front of the receiver box in the ON position before installing batteries. Once the batteries are installed you will hear a single beep which indicates the batteries are charged. If you do not hear a beep, replace with new batteries.

![Figure 23 - Installing Batteries in Remote Control and Receiver](image)

Ignitor

Unscrew ignitor cap and install a AAA battery with the + pointing out. Replace cap.

![Figure 22 - Installing Battery in Ignitor](image)
OPERATION

FOR YOUR SAFETY READ BEFORE LIGHTING

⚠️ WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• Do not try to light any appliance.
• Do not touch any electric switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

LIGHTING INSTRUCTIONS

⚠️ WARNING: You must operate this heater with the screen in place. Make sure screen is installed before running heater.

NOTICE: During initial operation of new heater, burning logs will give off a paper-burning smell. Orange flame will also be present. Open damper or window to vent smell. This will only last a few hours.

1. STOP! Read the safety information above.
2. Make sure equipment shutoff valve is fully open.
3. Push in the control knob slightly and turn clockwise to the OFF position.
4. Wait five (5) minutes to clear out any gas. Then smell for gas around heater and near the floor. If you smell gas, STOP! Follow “B” in the safety information above. If you do not smell gas, go to the next step.
5. Push in the control knob slightly and turn counterclockwise to the PILOT position. Press in control knob for five (5) seconds (see Figure 24).

Note: The first time that the heater is operated after connecting the gas supply, the control knob should be pressed for about thirty (30) seconds. This will allow air to bleed from the gas system. If pilot does not stay lit, refer to Troubleshooting, pages 26 through 29. Also contact a qualified service technician or gas supplier for repairs. Until repairs are made, light pilot with match.

Figure 24 - Control Knob in the OFF Position

Ignitor Button
Control Knob
Receiver

www.worldmkting.com
200038-01B
OPERATION

- If control knob does not pop up when released, contact a qualified service technician or gas supplier for repairs.

6. With control knob pressed in, push down and release ignitor button. This will light pilot. The pilot is attached to the burner. If needed, keep pressing ignitor button until pilot lights. Note: if pilot does not stay lit, refer to Troubleshooting, pages 26 through 29. Also contact a qualified service technician or gas supplier for repairs. Until repairs are made, light pilot with match. To light pilot with match, see Manual Lighting Procedure.

7. Keep control knob pressed in for 30 seconds after lighting pilot. After 30 seconds, release control knob. Note: if pilot goes out, repeat steps 4 through 8. This heater has a safety interlock system. Wait one (1) minute before lighting pilot again.

8. Be sure the slide switch on the front of the receiver is in the ON position.

9. Turn control knob counterclockwise to the ON position. The main burner should light.

10. Make sure the heater screen is in place before operating heater.

11. If heater will not operate, follow the instructions To Turn Off Gas To Appliance, and call your service technical or gas supplier.

⚠️ CAUTION: Do not try to adjust heating levels by using the equipment shutoff valve.

⚠️ WARNING: If input gas type is NG, make sure NG pilot burner ignites. If input gas type is LP, make sure LP pilot burner ignites (see Figure 35, page 26).

TO TURN OFF GAS TO APPLIANCE

Shutting Off Heater

Turn control knob clockwise to the OFF position.

Shutting Off Burner Only (pilot stays lit)

Turn control knob clockwise to the PILOT position.

MANUAL LIGHTING PROCEDURE

1. Remove screen by lifting and pulling forward.

2. Follow steps 1 through 6 under Lighting Instructions, page 20.

3. With control knob in PILOT position, strike match, and hold near pilot. Press in control knob; pilot should light.

5. Make sure the heater screen is in place before operating heater.
OPERATION

REMOTE CONTROL SYSTEM

Programming the Remote and Receiver
The remote and receiver must be "learned" to one another.
To prepare the receiver box for learning, use a pen or small screwdriver to gently press and hold the learn button until you hear 3 series of beeps.
1. Place the slide switch on the receiver in the remote position (see Figure 21).
2. Turn control knob on the heater to the ON position.
3. Use a pen or small screwdriver to gently press and hold the recessed LEARN button on the face of the receiver for 2-3 seconds. You will hear a beep.
4. Press the ON button on the remote control to light the burner (see Figure 21). You will hear a series of beeps. This will also "learn", or program, the remote and the receiver.

Note: Remote must be at least 5 feet away from the receiver during the learning process.

Note: If the remote control is lost or damaged, the slide switch on the receiver can be used to operate the heater.

Note: When batteries are replaced the learning process above must be repeated.

Key Settings
ON - Operates unit to on position, manually operated solenoid ON.
OFF - Operates unit to off position, manually operated solenoid OFF.
MODE - Changes unit from manual mode to thermo mode.
SET - Sets temperature in thermo mode.

Figure 26 - Remote Control

LCD Liquid Crystal Display
1. DISPLAY Indicates CURRENT room temperature.
2. °F or °C Indicates degrees Fahrenheit or Celsius.
3. FLAME Indicates burner/valve in operation.
4. ROOM Indicates remote is in THERMO operation.
5. TEMP Appears during manual operation.
6. SET Appears during time the of setting the desired temperature in the thermo operation.

Figure 27 - Remote Control Display

Remote Control Operation
This appliance must not be used with glass doors in the closed position. This can lead to pilot outages and severe sooting outside the fireplace.
The transmitter operates on 2 AAA batteries.
OPERATION

Setting °F/°C Scale
The factory setting for temperature is °F. To change this setting to °C, press the ON key and the OFF key on the remote control at the same time (see Figure 26, page 22). This will change from °F to °C. Follow this same procedure to change from °C back to °F.

Manual Function
To operate the system in the manual “MODE” do the following.

ON OPERATION
Press the ON key and the appliance flame will come on. During this time the LCD screen will show ON (see Figure 28).
After 3 seconds the LCD screen will default to display room temperature and the word TEMP will show (see Figure 23). The flame icon will appear on LCD screen in manual on mode.

OFF OPERATION
Press the OFF key and the appliance flame will shut off. During this time the LCD screen will show OF (see Figure 29).
After 3 seconds the LCD screen will default to display room temperature and the word TEMP will show (see Figure 29).

Figure 28 - Manual Mode in ON Operation

Figure 29 - Manual Mode in OFF Operation

THERMOSTAT FUNCTION
Setting Desired Room Temperature
The remote control system can control the thermostat when the transmitter is in the THERMO mode. The word ROOM must be displayed on the screen.
To set the THERMO MODE and desired room temperature:
1. Press the MODE key until the LCD screen shows the word ROOM. The remote is now in the thermostatic mode.
2. Press and hold the SET key until the desired set temperature is reached. The LCD screen set numbers will increase from 45° to 99° and then restart over at 45°.
3. Release the SET key. The LCD screen will display the set temperature for 3 seconds, then flash the set temperature for 3 seconds, then LCD screen will default to display the room temperature.

To Change The Set Temperature
1. Press and hold the SET key until the desired set temperature is reached. The LCD screen set numbers will increase from 45° to 99° then restart over at 45°.
2. Release the SET key. The LCD screen will display the set temperature for 3 seconds, then flash the set temperature for 3 seconds, then the LCD screen will default to display the room temperature.
3. Press the MODE key to disengage the thermo mode. The word ROOM on the LCD screen will not show when the thermo is not in operation.

Note: The highest SET temperature is 99°F (32 °C) and the lowest temperature is 45°F (6° C).

REMOTE CONTROL OPERATION NOTES
The Thermo Feature on the transmitter operates the appliance whenever the ROOM TEMPERATURE varies a certain number of degrees from the SET TEMPERATURE.
This variation is called the “swing” or temperature differential. The normal operating cycle of an appliance may be 4 times per hour depending on how well the room or home is insulated from the cold or drafts. The factory setting for the “swing number” is 2. This represents a temperature variation of +/-2°F (1°C) between SET temperature and ROOM temperature, which determines when the fireplace will be activated. The transmitter has ON and OFF manual functions that are activated by pressing either button on the face of the transmitter. When a button on the transmitter is pressed the word ON or OF will appear on the LCD screen to show while the signal is being sent. Upon initial use, there may be a delay of three seconds before the remote receiver will respond to the transmitter. This is part of the system’s design.
INSPECTING BURNERS

IMPORTANT: Owner’s should check pilot flame pattern and burner flame pattern often. Incorrect flame patterns indicate the need for cleaning (see Care and Maintenance, page 25) or service.

WARNING: Only a qualified service person should service and repair heater. This includes maintenance requiring replacement or alteration of components.

PILOT FLAME PATTERN

Figure 30 shows a correct pilot flame pattern. Figure 31 shows an incorrect pilot flame pattern. The incorrect pilot flame is not touching the thermocouple. This will cause the thermocouple to cool, which shuts the heater off. If pilot flame pattern is incorrect, as shown in Figure 31:

- turn heater off (see To Turn Off Gas to Appliance, page 21)
- see Troubleshooting pages 26 through 29.

WARNING: If yellow tipping occurs, your heater could produce increased levels of carbon monoxide. If the burner flame pattern shows yellow tipping, follow instructions at bottom of this page.

Notice: Do not mistake orange flames with yellow tipping. Dirt or other fine particles enter the heater and burn causing brief patches of orange flame.

Figure 30 - Correct Pilot Flame Pattern
(Natural Gas shown)

Figure 31 - Incorrect Pilot Flame Pattern
(Natural Gas shown)

BURNER FLAME PATTERN

Figure 32 shows a correct burner flame pattern. Figure 33 shows an incorrect burner flame pattern. If burner flame pattern is incorrect then:

- turn heater off (see To Turn Off Gas to Appliance, page 21).
- see Troubleshooting pages 26 through 29.

Approx. 3”-6” Above Top of Logs

More Than 8” Above Top of Logs

Figure 32 - Correct Burner Flame Pattern

Figure 33 - Incorrect Burner Flame Pattern

BURNER PRIMARY AIR HOLES

Air is drawn into the burner through the holes in the fitting at the entrance to the burner. These holes may become blocked with dust or lint. Periodically inspect these holes for any blockage and clean as necessary. Blocked air holes will create soot.
CARE AND MAINTENANCE

⚠️ WARNING: Turn off heater and let cool before servicing.

⚠️ CAUTION: You must keep control areas, burner, and circulating air passageways of heater clean. Inspect these areas of heater before each use. Have heater inspected yearly by a qualified service technician. Heater may need more frequent cleaning due to excessive lint from carpeting, bedding material, pet hair, etc.

⚠️ WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.

MAIN BURNER

Periodically inspect all burner flame holes with the heater running. All slotted burner flame holes should be open with yellow flame present. All round burner flame holes should be open with a small blue flame present. Some burner flame holes may become blocked by debris or rust, with no flame present. If so, turn off the heater and let it cool, and remove blockage or replace burner. Blocked burner flame holes will create soot.

CLEANING BURNER PILOT AIR INLET HOLE

We recommend that you clean the unit every 2,500 hours of operation or every three months. We also recommend that you keep the burner tube and pilot assembly clean and free of dust and dirt. To clean these parts we recommend using compressed air no greater than 30 PSI. Your local computer store, hardware store, or home center may carry compressed air in a can. You can use a vacuum cleaner in the blow position. If using compressed air in a can, please follow the directions on the can. If you don’t follow directions on the can, you could damage the pilot assembly.

1. Shut off the unit, including the pilot. Allow the unit to cool for at least thirty minutes.
2. Inspect burner, pilot and primary air inlet holes on injector for dust and dirt (see Figure 34).
3. Blow air through the ports/slots and holes in the burner. Also clean the pilot assembly.
4. Check the injector holder located at the end of the burner tube again. Remove any large particles of dust, dirt, lint, or pet hair with a soft cloth or vacuum cleaner nozzle.
5. Blow air into the primary air holes on the injector holder.
6. In case any large clumps of dust have now been pushed into the burner. Repeat steps 3 and 4.

Figure 34 - Burner and Injector Holder
CARE AND MAINTENANCE

ODS/PILOT

Use a vacuum cleaner, pressurized air, or a small, soft bristled brush to clean. A yellow tip on the pilot flame indicates dust and dirt in the pilot assembly. There is a small pilot air inlet hole about 2” from where the pilot flame comes out of the pilot assembly (see Figure 35). With the unit off, lightly blow air through the air inlet hole. You may blow through a drinking straw if compressed air is not available.

CABINET

Air Passageways
Use a vacuum cleaner or pressurized air to clean.

Exterior
- Use a soft cloth dampened with a mild soap and water mixture.
- Wipe the cabinet to remove dust.

LOGS

- If you remove logs for cleaning, refer to installing Logs, page 18, to properly replace logs.
- Replace log(s) if broken or chipped (dime-size or larger).

BLOWER (OPTIONAL ACCESSORY)

Refer to blower manual.

TROUBLESHOOTING

⚠️ WARNING: If you smell gas:
- Shut off gas supply.
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

⚠️ WARNING: Only a qualified service technician should service and repair heater. Make sure that power is turned off before proceeding. Turn off and let cool before servicing.

⚠️ CAUTION: Never use a wire, needle, or similar object to clean ODS/pilot. This can damage ODS/pilot unit.

IMPORTANT: Operating heater where impurities in air exist may create odors. Cleaning supplies, paint, paint remover, cigarette smoke, cements and glues, new carpet or textiles, etc., create fumes. These fumes may mix with combustion air and create odors.

Note: All troubleshooting items are listed in order of operation.

| Burner(s) does not light after ODS/pilot is lit | 1. Burner orifice is clogged.  
2. Burner orifice diameter is too small.  
3. Inlet gas pressure is too low. | 1. Clean burner orifice (see Care and Maintenance, page 25) or replace burner orifice.  
2. Replace burner orifice.  
3. Contact local gas supplier. |
| Delayed ignition of burner(s). | 1. Manifold pressure is too low.  
2. Burner orifice is clogged. | 1. Contact local gas supplier.  
2. Clean burner (see Care and Maintenance, page 25) or replace burner orifice. |
| Burner backfiring during combustion | 1. Burner orifice is clogged or damaged.  
2. Burner is damaged.  
3. Gas regulator is damaged. | 1. Clean burner orifice (see Care and Maintenance, page 25) or replace burner orifice.  
2. Contact dealer or customer service.  
3. Replace gas regulator. |
| High yellow flame during burner combustion | 1. Not enough air.  
2. Gas regulator is defective.  
3. Inlet gas pressure is too low. | 1. Check burner for dirt and debris. If found, clean burner (see Care and Maintenance, page 25).  
2. Replace gas regulator.  
3. Contact local gas supplier. |
| Gas odor during combustion. | 1. Foreign matter between control valve and burner.  
2. Gas leak. (See Warning Statement at top of page 23.) | 1. Take apart gas tubing and remove foreign matter.  
2. Locate and correct all leaks (see Checking Gas Connections, page 16). |
| Slight smoke or odor during initial operation | 1. Residues from manufacturing process. | 1. Problem will stop after a few hours of operation. |
| Heater produces a whistling noise when burner is lit. | 1. Air in gas line.  
2. Air passageways on heater are blocked.  
3. Dirty or partially clogged burner orifice. | 1. Operate burner until air is removed from line. Have gas line checked by local gas supplier.  
2. Observe minimum installation clearances (Figure 4, page 10)  
3. Clean burner (see Care and Maintenance, page 25) or replace burner orifice. |
| Heater produces a clicking/ticking noise just after burner is lit or shut off. | 1. Metal is expanding while heating or contracting while cooling. | 1. This is common with most heaters. If noise is excessive, contact qualified service technician. |

## REPLACEMENT PARTS

*Note: Use only original replacement parts. This will protect your warranty coverage for parts replaced under warranty.*

### PARTS UNDER WARRANTY

Contact authorized dealers of this product. If they can’t supply original replacement parts, call Customer Service toll free at 1-800-776-9425 for referral information.

When calling Customer Service or your dealer, have ready:
- Your name
- Your address
- Model and serial number of your heater
- How heater was malfunctioning
- Type of gas used (Propane/LP or Natural gas/NG)
- Purchase date
- Usually, we will ask you to return the defective part to the factory

### PARTS NOT UNDER WARRANTY

Contact authorized dealers of this product. If they can’t supply original replacement part(s) call Customer Service toll free at 1-800-776-9425 for referral information.

When calling Customer Service have ready:
- Model number of your heater
- The replacement part number
